

VOITH COMPRESSORS UK

Voith Turbo UK, the leading European bus transmissions specialist, has appointed Majorsell as the sole distributor of Voith air compressors to the truck and bus components independent aftermarket in the UK and Ireland.

Majorsell already distributes a vast range of air braking components including compressors for trucks and buses and the addition of Voith compressors is an important enhancement to our product offering.

Voith Turbo's compressors have been extremely successful on buses which require a much heavier duty cycle than trucks and the Voith light-weight LP490 two-cylinder Euro 6 compliant compressor has been fitted as original equipment to Mercedes Benz Actros, Antos and Arocs trucks for about five years with great success.

Until now replacement units have only been available through the vehicle manufacturer's dealer network, so by holding stock at our West Midlands distribution centre we are now in the ideal position to deliver Voith compressors more quickly and more competitively priced than before.

Distributing new Voith compressors is only a small part of the story - with Majorsell's long history as an air braking specialist we have the expertise to provide customers with a wealth of specialist information and valuable technical and diagnostic advice on all popular makes of air braking compressors.
